

WOOD STOVE ACCESSORIES

You can add a few accessories to your wood stove to improve efficiency.

Wood Stove Fan: A wood stove fan improves efficiency by circulating heat from the stove, ensuring even distribution throughout the room. Purchase one at home improvement stores, specialty fireplace shops, or online retailers. Consider factors like size and features before buying.

Thermometer: A wood stove thermometer helps improve efficiency by providing temperature information, allowing you to optimize wood burning for maximum heat output and preventing over-firing. You can find wood stove thermometers at home improvement stores or online retailers.

Fireplace Grate: Elevates logs for better airflow, promoting more complete combustion and increasing heat output.
